5000 Digital Expansion Interface

Mitel Digital Expansion Interface Digital and Analog Support

Mitel® 5000 Communications Platform (CP) enables organizations to blend their voice system into their data network, creating a cost-effective, efficient communications environment. The Mitel Digital Expansion Interface (DEI) provides businesses with flexibility in deploying digital and analog solutions, complementing the HX Controller with additional digital and analog capacity.

Each DEI offers three expansion bays that each accommodate the Digital Endpoint Module (DEM-16) for digital phones or the Single Line Module (SLM-8) for analog extensions.

The DEI, 1U form factor design, allows for the connection of up to 48 digital phones. Up to four DEI's can be added to the HX Controller, enabling up to 192 digital phones (or 240 total when used in combination with the HX Controller Digital Desktop Module (DDM-16) units.

In software release 4.0, the former DEI licensing has been replaced with digital phone licensing. Instead of licensing increments of 48 phones at a time, users can now license phones incrementally providing smoother scaling. Note that 5000 CP base kits contain some quantity of digital phone licenses. Analog phones ports (e.g. SLM) do not require licensing.
